Question bank

Sr. No.	Question Text	Marks
Unit No : Unit 1 & Unit 2 & Unit 3 &Unit 4		
1.	Which pattern does Django follow? a) MVVM b) MVC c) MVP d) MVT	1
2.	In Django, models are defined in which file by default? a) views.py b) models.py c) urls.py d) forms.py	1
3.	Which command is used to create migrations in Django? a) makemodel b) makemigrations c) migratecreate d) startmigration	1
4.	The Django admin interface can be customized by modifying which file? a) admin.py b) models.py c) views.py d) settings.py	1
5.	Which method is used to save a model instance in Django? a) store() b) insert() c) save() d) commit()	1
6.	In Django, the `render()` function is used to: a) Execute queries b) Send email c) Render templates with context d) Create models	1
7.	Which HTTP method is used for updating an object in CRUD operations? a) GET b) POST c) PUT/PATCH d) DELETE	1

8.	In Django, uploaded files are stored using the settings variable: a) MEDIA_URL b) MEDIA_ROOT c) FILE_PATH d) STATIC_ROOT	1
9.	Which Django module handles user login and logout? a) django.auth b) django.contrib.auth c) django.sessions d) django.user	1
10.	Which Django framework is used to display temporary success or error messages? a) Toasts b) Alerts c) Messages framework d) Notifications	1
11.	Django signals are primarily used for: a) Inter-process communication b) Triggering actions on certain events c) Debugging d) Logging	1
12.	In DRF, serializers are used for: a) Database migrations b) Converting complex data to JSON/XML c) Rendering templates d) Handling sessions	1
13.	Which serializer type allows nested relationships in DRF? a) BasicSerializer b) NestedSerializer c) ModelSerializer d) HyperlinkedSerializer	1
14.	In DRF, ViewSets combine: a) Models and Templates b) Views and Routers c) CRUD operations into a single class d) Signals and Middleware	1
15.	DRF Routers are used to: a) Manage templates b) Automatically generate URL patterns for ViewSets c) Handle database queries d) Manage signals	1
16.	Which DRF class controls access to API endpoints? a) Views b) Routers c) Permissions d) Middleware	1
17.	JWT stands for: a) Java Web Tokens b) JSON Web Tokens c) JavaScript Web Transport d) JSON Writable Type	1
18.	Which DRF package is used for JWT Authentication? a) django-rest-framework-jwt b) django-jwt-auth c) rest_framework_simplejwt d) jwt-drf	1
19.	The default HTTP method allowed in DRF ViewSets is: a) GET b) POST c) GET, POST, PUT, DELETE d) Only GET and POST	1

20.	In DRF, the `is_authenticated` attribute belongs to: a) request.user b) request.session c) serializer.data d) view.router	1
21.	In Django, which signal is triggered after a model instance is saved? a) pre_save b) post_save c) save_signal d) after_save	1
22.	In DRF, which permission class grants read-only access to unauthenticated users but write access to authenticated users? a) IsAuthenticated b) IsAdminUser c) AllowAny d) IsAuthenticatedOrReadOnly	1
23.	Which file in an Odoo module defines the basic metadata (name, version, dependencies)? a) __init__.py b) __manifest__.py c) models.py d) views.xml	1
24.	Which relational field in Odoo defines a many-to-one relationship? a) Many2many b) Many2one c) One2many d) Char	1
25.	Which Odoo view type is used to display data in a tabular format? a) Kanban b) Form c) Tree d) Calendar	1
26.	Which decorator is used in Odoo to compute field values dynamically? a) @onchange b) @compute c) @depends d) @model	1
27.	In QWeb templates, which symbol is used for dynamic value rendering? a) {% %} b) [[]] c) t-esc d) <? ?>	1
28.	Which relational field is used when a record can have multiple associated records in both directions? a) Many2one b) One2many c) Many2many d) Char	1
29.	Which of the following is true about @api.onchange in Odoo? a) It is triggered when the record is saved b) It is triggered immediately after a field value changes c) It computes values automatically on all records d) It replaces @compute decorator	1
30.	In Odoo, which file is mandatory to load views? a) controllers.py b) __init__.py c) XML file inside views/ folder d) README file	1
31.	CRON jobs in Odoo are used for: a) Manual execution b) Scheduled automation c) User login d) Debugging	1

32.	Django's message framework is used to: a) Manage URLs b) c) Handle forms b) Display feedback d) Send mail	1
33.	Which HTTP method is used for updating data via REST API? a) GET c) PUT b) POST d) HEAD	1
34.	What does MVC stand for in Django context?	2
35.	Which command applies migrations in Django?	2
36.	What is the role of 'ModelSerializer' in DRF?	2
37.	Name two built-in authentication classes in DRF.	2
38.	What is the default port for Django's development server?	2
39.	What is the purpose of the __manifest__.py file in an Odoo module?	2
40.	Differentiate between Many2one and One2many relational fields.	2
41.	What is the purpose of the __manifest__.py file in an Odoo module?	2
42.	Differentiate between Many2one and One2many relational fields.	2
43.	What is the use of __init__.py in an Odoo module?	2
44.	What is the use of Django signals? Give one example.	3
45.	Define 'MEDIA_ROOT' and 'MEDIA_URL' in Django.	3
46.	List different types of Permissions in DRF.	3
47.	What is a Router in DRF?	3
48.	Mention two advantages of using JWT Authentication.	3
49.	Explain the use of computed fields in Odoo with an example.	3
50.	Write a short note on inheritance in Odoo views.	3
51.	Explain the use of computed fields in Odoo with an example.	3
52.	Write a short note on inheritance in Odoo views.	3
53.	Describe the use of QWeb templates in Odoo reporting	3
54.	Define CRON jobs in Odoo with an example use case.	3
55.	What is the purpose of Server Actions in Odoo?	3
56.	What are Email Templates in Odoo? How are they linked with automation?	3
57.	What are Email Templates in Odoo? How are they linked with automation?	3
58.	What are KPI widgets in Odoo dashboards?	3
59.	Define Scheduled (CRON) Jobs in Odoo. Why are they used?	3
60.	Differentiate between Django Models and Migrations.	4
61.	Write steps to customize Django Admin interface.	4
62.	Explain CRUD operations in Django using Forms.	4
63.	Describe Permissions in Django REST Framework with an example.	4
64.	Explain the use of Nested Serializers in DRF.	4
65.	Describe different Odoo view types (Tree, Form, Kanban) with suitable use cases.	4

66.	Explain the use of @api.onchange decorator with an example.	4
67.	Describe different Odoo view types (Tree, Form, Kanban) with suitable use cases.	4
68.	Explain the use of @api.onchange decorator with an example.	4
69.	Explain the difference between model inheritance (_inherit) and class inheritance in Odoo.	4
70.	Explain Email automation using templates.	4
71.	Explain the process of creating and configuring a Server Action in Odoo.	4
72.	Describe how to create a Scheduled (CRON) Job in Odoo with a suitable example.	4
73.	Explain how KPI widgets enhance decision-making in a custom Odoo dashboard.	4
74.	Write a short note on Odoo.sh as a deployment platform. Mention two advantages.	4
75.	Explain how CRON jobs and Server Actions can work together to automate a business workflow.	4
76.	Explain Django's MVT architecture with a diagram.	5
77.	Describe the process of creating and applying migrations in Django.	5
78.	Explain the steps to implement file upload in Django with media management.	5
79.	Discuss Django's authentication system for login and logout functionality.	5
80.	Explain Django REST Framework's ViewSets and Routers with an example.	5
81.	Describe JWT Authentication using `djanoorestframework-simplejwt` with setup steps.	5
82.	Explain the role of Django templates in the MVT architecture with an example.	5
83.	Describe the process of creating a custom user model in Django.	5
84.	Explain how to handle file validation in Django forms.	5
85.	Write token-based authentication vs session-based authentication in Django REST Framework.	5
86.	Write the steps to implement API versioning in Django REST Framework.	5
87.	Discuss the structure of an Odoo module with examples of essential files.	5
88.	Explain relational fields in Odoo (Many2one, One2many, Many2many) with practical examples.	5
89.	Discuss the structure of an Odoo module with examples of essential files.	5
90.	Explain relational fields in Odoo (Many2one, One2many, Many2many) with practical examples.	5
91.	Explain the process of creating a custom report in Odoo using QWeb templates.	5
92.	Demonstrate external API integration in Odoo for automation.	5
93.	Illustrate deployment of Odoo using Odoo.sh or Docker setup.	5

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

94.	Design an automated process in Odoo using Server Actions and CRON Jobs to send monthly sales reports to the manager. Explain the steps.	5
95.	Compare deployment of Odoo on Odoo.sh vs Docker in terms of setup, scalability, and maintenance.	5
96.	Explain how to integrate Odoo with a third-party payment API (e.g., Stripe or PayPal). Include authentication and data exchange details.	5
97.	Discuss the key components and customization of a dashboard with KPI widgets in Odoo. Provide an example use case.	5
